

# International Conference on AI, Data Science, Cybersecurity, Cloud Architectures, and Software Engineering

Conference Proceedings

April 23, 2026 - (Virtual)

## AI for Social Good and Responsible Innovation

Noha Elfiky

Professor, Artificial Intelligence and Business & Data Analytics, Saint Mary's College of California, USA

### Abstract

As artificial intelligence becomes increasingly embedded in the tools we use every day, the way we work, learn, and lead is evolving rapidly. This talk explores how AI can be leveraged as a force for social good—enhancing productivity and decision-making not by replacing people, but by augmenting human potential and promoting inclusion.

Drawing on real-world examples, the session highlights strategies for designing responsible, human-centered AI systems that address societal challenges, support equitable access, and create positive social impact. Emphasis is placed on ethical implementation, transparency, and inclusive innovation, demonstrating how AI can drive meaningful results while contributing to sustainable growth and the well-being of diverse communities.
