Ablation in Patients with Tachycardia is Not the Solution in this New Global Immunodeficiency

Huang WL^{1*} and Lopes GH²¹Wu Wei Institute - Infectious disease, Clinical Medicine, Enteral and Parenteral Nutrition, Pain Management, Practitioner of Traditional Chinese Medicine, Brazil²Medical Student at University of Ribeirão Preto – UNAERP – Brazil**ABSTRACT**

The use of ablation procedures in patients in this new global immunodeficiency should be approached with caution. In this article, we present the case of a 40-year-old woman who was experiencing tachycardia and arrhythmia and was advised by her cardiologist to undergo an ablation procedure. She subsequently consulted a physician who practiced Traditional Chinese Medicine and assessed the energy levels of the five internal massive organs using radiesthesia. The energy levels of all five organs (Liver, Heart, Spleen, Lungs and Kidney) were found to be at the lowest level, rated one on a scale of eight. Treatment using Traditional Chinese Medicine techniques, along with replenishment of the energy of these organs through highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine*, was essential in addressing the root cause of her symptoms. As a result, she no longer required cardiac ablation.

Introduction

Cardiac ablation is a procedure used to treat patients with arrhythmias, which are irregular heartbeats [1].

The procedure creates scar tissue that blocks abnormal electrical signals in the heart and helps restore a normal heart rhythm [1].

The purpose of this study is to demonstrate that cardiac arrhythmias may be caused by systemic alterations that are not located within the heart tissue itself. Therefore, even after undergoing ablation, patients may continue to experience cardiac arrhythmias or tachycardia. In this new global immunodeficiency that we are facing for the last 12 years, it is common to see tachycardia due to formation of internal Fire, caused by energy deficiency inside the five internal massive organs influenced by the electromagnetic radiation, after the modernization of telecommunication.

Methods

This case report describes a 40-year-old female patient with a history of heart palpitations that began approximately four years ago (2022). She frequently experienced episodes of rapid heartbeat and a sensation that her heart was racing. She consulted a cardiologist and was diagnosed with an arrhythmia. Amiodarone was prescribed, which helped control the arrhythmia; however, the palpitations persisted.

Recently, she returned to her cardiologist, who recommended a cardiac ablation procedure. Before proceeding, she sought

consultation with a physician trained in Traditional Chinese Medicine. The physician evaluated the energy of her five internal massive organs (Liver, Heart, Spleen, Lungs, and Kidneys) and found that all were at the lowest energy level. According to this assessment, this finding is characteristic of individuals affected by the New Global Immunodeficiency. The treatment included Chinese dietary counseling, auricular acupuncture with apex ear bloodletting, and replenishment of the energy of the internal organs through highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine (Wu Wei Protocol)*, as well as crystal-based medications.

Results

Since beginning treatment, the patient has experienced significant improvement and now rarely experiences palpitations. Because of this progress, her cardiologist decided not to proceed with the ablation procedure and instead prescribed medication to help manage any remaining symptoms. The patient reported that she was already feeling considerably better after starting the Wu Wei Protocol prescribed by the Traditional Chinese Medicine physician. The acupuncture sessions also contributed substantially to her improvement. She now sleeps much better, feels more rested upon waking, and reports a significant improvement in overall sleep quality. Previously, she would wake up feeling fatigued, but this symptom has improved considerably. Most importantly, her arrhythmia and palpitations have almost completely disappeared.

Discussion

This article follows the philosophy of Hippocrates (460 BC- 377 BC), the father of medicine, who stated that “it is more important to know what sort of person has a disease than to know what sort of disease a person has” [2].

We are currently facing a New Global Immunodeficiency that began in 2014 and is associated with the modernization of telecommunications. According to this perspective, many symptoms and diseases observed today are associated with underlying energy deficiencies [3-4].

In a previous article (2021) titled *Energy Imbalances and Chakras' Energy Deficiencies as One of the Cause of Tachycardia*, the author demonstrated that patients with tachycardia frequently present with energy deficiencies in the five internal massive organs. According to Traditional Chinese Medicine principles, the cause of tachycardia is not necessarily an abnormality within the heart itself. Instead, tachycardia may represent a clinical manifestation of internal Fire generated by deficiencies in the energy of these organs [5].

For this reason, before performing any surgical procedure, it is important to address the patient's underlying energy deficiency. Surgical procedures require anesthesia and the administration of medications, which are often highly concentrated. According to this theory, such interventions may further compromise the patient's energy balance and increase the risk of complications [6].

In the present case, the patient had experienced symptoms for approximately four years, and the highly concentrated medications prescribed by conventional cardiology treatments did not fully resolve her condition. According to Traditional Chinese Medicine reasoning, these medications may further reduce the patient's internal energy, promoting the formation of additional internal Fire and consequently worsening symptoms such as palpitations and tachycardia instead of improving them [5, 7].

This reduction in internal energy associated with highly concentrated medications is explained by the Arndt-Schulz Law, proposed in 1888 by two German researchers. According to this principle, highly concentrated substances may reduce vital energy, whereas highly diluted substances may stimulate it [7].

Therefore, highly diluted medications represent the preferred therapeutic approach for patients considered immunodeficient due to the implementation of 5G technology [8-9].

Once the patient began addressing the underlying cause of her tachycardia through the Wu Wei Protocol which consisted of Chinese dietary counseling, auricular acupuncture with apex ear bloodletting, and replenishment of the energy of the five internal massive organs using highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine* her symptoms improved substantially, and cardiac ablation was no longer considered necessary [5, 10].

Conclusion

The conclusion of this study is to demonstrate that cardiac ablation in patients with arrhythmia or tachycardia should be approached with caution because the current population is considered immunodeficient caused by energy deficiency inside the five internal massive organs of traditional Chinese medicine, due

to the modernization of telecommunications. The treatment of this condition through highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine*, together with Traditional Chinese Medicine approaches such as Chinese dietary counseling and auricular acupuncture with apex ear bloodletting, is of paramount importance because it aims to address the root cause of disease formation rather than merely controlling symptoms. In the present case, treating the underlying energy imbalance contributed to the resolution of tachycardia and arrhythmia symptoms and eliminated the need for cardiac ablation.
