This is an excellent website, it has attractive sections for expecting parents, that display information in a simple way via their educational HUB, those information are about. chromosomes, trisomies, NIPT and amniocenteses, and also other sections that display information for healthcare providers.

This website contains also an application tool called (Maternal Age-Specific Risk Calculator for Down Syndrome) which helps obstetricians during counselling patients about NIPT. As we know that the risk of having a term pregnancy with Down Syndrome increases with maternal age and is known as the maternal age-specific risk.

This application allows you to enter in your maternal age at term and view your maternal age-specific risk for Down Syndrome.

This is an important tool which is used to address parents concerns regarding their pregnancies or planned pregnancies and non-invasive prenatal testing. They have developed these interactive features to provide parents with more information about their pregnancy and to help them decide if non-invasive prenatal testing is right for them.

Recommend to Colleagues

This website is recommended as an educational resource to health professionals involved in maternal or child health. It would be useful also for students going on medical elective.
