

## The How in Gravity

Leonard van Zanten

Independent Researcher, Riverside Ca, USA

### ABSTRACT

The topic in this article is by revelation, not by discovery, for if any man can discover gravity for what it is, he will be the death of the human race. So, the Almighty Creator has promised us by Jeremiah 31:37. What audacity of man to think he could discover it.

### Foreword

Noone to date has been able to figure out gravity, all that is seen on the net and elsewhere is mere fantasy with no reality or common sense. And why should it not be so since only God is able to reveal the truth. These foundations however would be understood even before the return of the Son of God, but not by any man born of this earth. And should any man vie as if he knew these fundamentals he or she will be pronouncing their own death sentence.

**That is indeed how serious it is to embark upon this subject;** only how does one tell the blind to see? It is indeed understood, and the first was King Solomon, and now so many years later the Lord imparted these secrets into the heart of another, just as it was prophesied allowing him to record the same. But why am I entering upon this subject to educate the sons of men in what will be for shame, **or a knife in my back?**

### Essay

When we have a spinning top as in figure 1 we tend to conclude that it defies gravity; that however is wrong. It is not by gravity to stay upright but by their own movement **since movement affixes rigidity**. Like a bicycle or motor-cycle once on the move, (Figure 2) these do not fall over as long as they remain in motion. So you see how well movement all in itself affixes rigidity. Does not that fact prove my point? Or as is said "Gyroscopic stability all the same.

Figure 1

Figure 2

But why am I speaking of gyro's in a subject leading to gravity? Because it is very much an ingredient of gravitational decent when these come to a precession. And I did say; "An ingredient." When you have a string and you wrap it around a stick and then move the stick will not the string go along with it? As then every atom is a coordinate of movement by the design of a figure of eight or close to it, it displays a or two circulars so typically seen with any magnet. And these make for a gyro effect just as any angular movement that always comes back to where it started.

As then the earth rotates and moves in orbit that linear impression upon those angular's come to what we call a torque upon the axis of that rotation resulting into a precession.

And just as in generating electricity where by the rotational movement of the armature we twist the straight lines of magnetic around one another into a braid, so that movement of precession (Or even the inclination thereto) of each single atom comes as one might say to wrap itself around the magnetic flux of the earth. That then is drawn inward to the very center of that magnetic flux by the equilibrium of that coordinate.

And to enhance it look at two magnets one to the other how by their directional conductive movement these draw to one other as well as repel depending on the direction of movement. It is in their conductive nature that they join or disjoin.

Here the power to move things is the magnetic force of the earth, with gravity the inclination into the embrace of that magnetic movement. **That is how and why our feet are kept upon the ground, and how and why we walk upright in line with the vector of that force.** This may be likened to a woman giving herself into the arms of a man illustrated by figures 3 and 4. The woman twirls, the man takes her home.

Figure 3

Figure 4

Right here and now I have indeed revealed how and by what gravity comes about, and upon what sort of fundamentals the earth rests. Have you ever wondered how and why we walk upright anywhere on this earth? **It is because the magnetic force of the earth holds us down, and since its movement comes to a center so we remain upright in line with that center all over the earth.** Our ears being programmed to that center of force, or any center of centrifugal. If not so by Newton's theory none of us would be upright, **mass to mass means flat on the ground.**

But no, you will say that our ears will keep us in balance. But that is not so **for without a vector our ears have nothing to respond to**, like in space when free of gravitational pull we tumble around. So, it would be on the surface of the earth if Isaac Newton were correct. Our whole body in space is none-the-less held in orbit by the velocity thereof. If however, we were in a large merry go around then the centrifugal impact could keep us upright our ears responding to that center as they do on the surface of the earth **to the axis of the earth.**

As then the moon passes over us and it affects the waters to the rise we also in our upright position are tilted however minor that may be, because we too are subject to the design of the force holding us down, not being ridged as the rocks are or the ground for that matter. This can be proven with some sensitive instruments if anyone is of a mind to prove me right or wrong.

From hereon in let us see what gravity is in what man has conceived, and how it affects us in different ways along with the calculations. For while Sir Isaac Newton was wrong in his conclusion of gravity, the mathematics in how to obtain the due amount of force is quite correct. Only in the more than 3 centuries since that famous law it seems no one was competent enough to actually make use of that law to discover just how far the extend of gravity might be here on earth as well as elsewhere. For which I must say; shame on man.

Quote: *Gravity is a fundamental force of nature that causes attraction between objects and mass* unquote.

Gravity in itself **is not** a fundamental force while the downward power or movement is by a coordinate of that one and only fundamental force.

Quote: *The strength of gravity varies on different celestial bodies depending on mass and radius.* Unquote.

Not fully correct.

Quote: *Einstein's general theory of relativity redefines gravity as the curvature of space-time caused by mass* Unquote,

**That in all respects is ludicrous, nothing but fantasy, and the sooner we accept the truth so much the better.**

Quote: *Gravity is responsible for keeping planets in orbit and shaping galaxies.* Unquote.

Quite wrong, had man made use of Newton's law of gravity in the last three centuries he would have discovered that gravity is but a local force with limited distance. And why do I have to be the first and only one in these centuries to actually make use of that law? **And to prove it**, lets see what the g/factor is on the Hubble space telescope.

Gross weight 24,500 lb. Orbital altitude 353 miles. Orbital velocity 17,500 mph. And to do this in whole numbers:  $24,500 \times 25,666 = 628,817,000 \times 25,666 = 16,139,217,122,000$  divided by  $22,983,840 = 702,198.46$  lb, divided by  $24,500 = 28.66$ .

This makes the Hubble telescope to have a g/force on it at 28.66. The factor of gravity 353 miles above the earth therefore is **28.66** and its acceleration if it were to fall would **start out** at 28.66 ft/sec/sec.

When therefore we deduct the 28.66 from 32.174 (at sea level) it comes to a decrease of 3.514 in those 353 miles, and this divided by the 353 comes to 0.009,954,674 per mile. Then by dividing the sea level factor of 32.174 by the decrease per mile, comes to 3.232 miles, at which point the factor of gravity is zero, and the acceleration would be zero ft/sec/sec. **With our moon at a distance of some 240,000 miles, how can it possibly be held gravitational?**

Sir Isaac Newton himself should have used his own law should he not? Had he done so he would not have made the error of mass to mass. But then had he imputed the discovery in himself he would have been the death of man. God of course knows that no-one without Him could possibly come to the truth. Or was it that in his time there were no satellites by which to compute the extend of gravity?

Quote: *Gravity is the weakest of the four fundamental forces, yet it has an infinite range and governs large scale cosmic structures.* Unquote.

Gravity is only an inclination not having any power in itself, while there is but one fundamental force, and gravity as such is very limited as seen earlier, and has nothing at all in the way of power to hold things together. And our latest fantasy for quantum gravity is likewise a crock, not worth going into.

Whether man likes it or not with gravity in its calculation anyway he will have to deal with Sir Isaac Newton, and its progression is - as I have outlined - not any kind of theory, God forbid that I should indulge in any kind of fantasy.

**CALCS**

How for example can we discover just how much g/force there is on any of us? We simply step upon the scale that reveals it to us in pounds or kilograms. Indeed, but that degree of g/force is from the whole of the planet, that is why it is the same all over the earth. It minds you is not in any way by centrifugal action, **and we do have that as well** as we move along with the rotation of the earth in which case our vector becomes the axis of the earth rather than its center.

For the example, a person of 165-lb, at the equator. Radius is: 4000 miles X 5280-ft = 21,120,000-ft. Velocity near the equator: 1000-mph x 5280 = 5,280,000-ft/hr: 60 = 88,000-ft/min: 60 = 1,467-ft/sec. Accordingly, 165 X 1457 = 242,055 X 1457 = 355.094,685: 21,120,000 = 16.81-lb.

The centrifugal inertia upon that person traveling at 1000-mph is thus 16.81 pounds, and every ounce of that is augmented by gravitational forces. (A rather ill statement to say “gravitational force” since it is not a force.) That amount of gravity then cannot possibly show up on the scale since it is two impacts off-setting one another. But the conclusion here is that the full amount of gravitational force upon a person at 165-lb is 181.81/lb of g.at the equator.

Or if we go towards the poles; let’s say midway our distance to the axis decreases, if it be 2000-miles the calculation is 10,560,000-ft in radius. And our velocity 2000 X 3.14 = 6,280-mil: 24 = 383.7-ft/sec. At 165-lb times 383.7 squared and divided by radius comes to 2.3-lb. His gravitational force upon him there would be 167.3-lb. Only that 2.3-lb cannot be read on the scales.

Then as to “why” we have to square the force of velocity, lies in the combination of inertia, the 165/lb of his angular inertia as weight upon the scale plus the added inertia of his movement in the linear. As one moves, **his velocity in the linear compounds with his angular momentum**, the grand total of the atoms in their movement. As therefore the linear multiplies it does so upon the angular coming to a four-fold force.

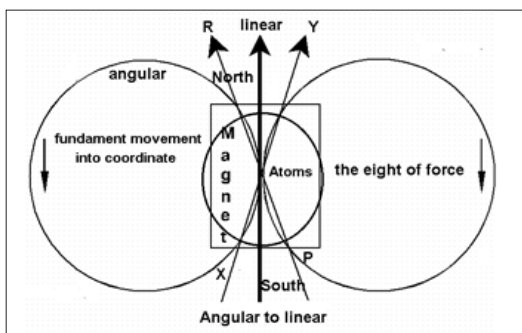

Figure 5

Then for figure 5 the typical pattern of movement found around a standard magnet are not two independent circles but a single circle twisted over to resemble **that figure of eight**. And as a circle it has this advantage that by that angular movement linear movement comes about with the power to move things. All movement coming into the south and exiting at the north provides linear power to move anything susceptible to its conductive nature, and it being directionally conductive.

For that particular movement is none other than the **one and only fundamental movement that God created or set forth**

**by, which to empower all things.** By it all atoms are made and held to one another, conclusively all things in nature are held by what we understand as magnetic.

**And all engines credit their fundamental power to magnetic, for as the atoms in their coordinate are raised to a higher velocity so they expand that in turn comes to the pressure to push down the pistons.**

We must learn how anything driven into an angular momentum is and becomes subject to what is called “centrifugal implication” that is of course to expand. With physical items these fly outwards, but that is no less true for none physical entities such as that figure eight of movement on any electrical conductor, or upon any atom while it spins or is stationary since its fundamental movement in the angular must and will expand.

Electricity as the rotating magnetic braid of force also expands as its velocity of rotation is increased, obvious from those high power poles the braids being kept far from the metal of those large poles.

As then each of these circulars may be part of a single circle, these nonetheless effect what is so well known in any gyro producing rigidity, that when nudged off balance comes to what is known as precession. No atom therefore can be free of its inclination towards gravity, nor to the power of magnetic by which it is drawn to its center of being. Nor therefore can the earth be motionless or there would be no gravity.

Variations in g,

Quote: *The acceleration of g varies by about 1/2 of 1 percent with position on Earth’s surface, from about 9.78 meters per second per second at the Equator to approximately 9.83 meters per second per second at the poles. In addition to this broad-scale variation, local variations of a few parts in 106 or smaller are caused by variations in the density of Earth’s crust as well as height above sea level.* Unquote.

Quite correct, the earth somewhat bulges at its equator wherefore it is further from the center of the earth coming to a small degree variation in the g/factor. And why should all things of any weight fall at the same rate? For an answer I should first illustrate again in another way just how and why things are drawn downward rather than falling. For we as anything never does fall but rather are driven downwards.

The wavelengths of light or radio are also driven not having their own momentum. And yes, we knew that, but not by any magnetic or electrical endeavors, but by the one and only fundamental movement that pervades all of the universe, namely that moving power which God created or set forth by which all physical things have their being.

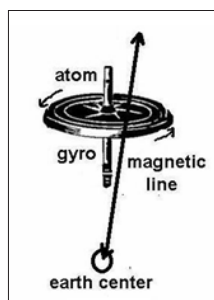

Figure 6

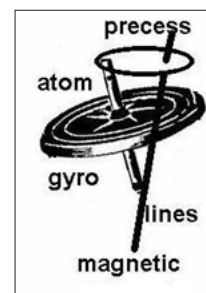

Figure 7

By figure 6 as the atom/gyro has its momentum at perfect balance it is not likely to twirl itself into the magnetic embrace. For this the earth would have to stand still with no movement at all. But when there is a precession as in figure 7 it does twirl itself into the magnetic embrace (like a string around a stick). So, then the force of magnetic for its typical design comes to draw it down to its center of being, rather than what we have understood as falling. I said “to its center” for we are never drawn to the body as to any body. In that Sir Isaac Newton was wrong.

Nothing at all ever falls not even the moon or any satellite orbiting earth, all of them are drawn. And when at equal resistance these simply are held in place, in orbit that is. When the moon for its magnitude in mass and velocity comes to an outward centrifugal impact to the tune of one million pounds the  $g$ /factor is equally one million pounds.

**But that strain upon the magnetic fabric holding both objects together does in fact elongate the normally rounded lines of magnetic between the two bodies whereby the waters are raised to a tide.** Like lifting a sheet, it effects a smaller place for the water to collect into.

Since then that magnetic flux is by a figure of eight, as one side is elongated so will the other end - providing us with **two equal tides on both sides of the Earth. That my dear reader is the truth regardless of what any man may have said. I do not lie nor guess at things.** And it confirms that the coordinate of movement by any magnet is in the design of a figure of eight. (8).

And to best explain how and why all objects of any size or weight are drawn down at the same rate (not falling now remember) lies in the degree of torque upon the atom/gyros. For this our reference will be to Figure 8; by the illustration when the  $g$ /factor is 16 the precessional inclination dips under by that degree. When at sea level it comes to 32 the dipping under is twice as great and therefore much stronger. The 32.174-lb  $g$ /factor at sea level thus is a T/factor rather than a  $g$ /factor. T for Torque.

One might liken the downward movement like a nut on a bolt at a specific number of treads per given distance. If then we are in the air at a T, or  $g$ /factor of 28 and we go downward at that rate namely 28-ft/sec/sec we are not altogether correct. The 28 would only be correct at that minor area in the sky, it increases as we near the surface of the earth to a factor of 32.174 at sea level.

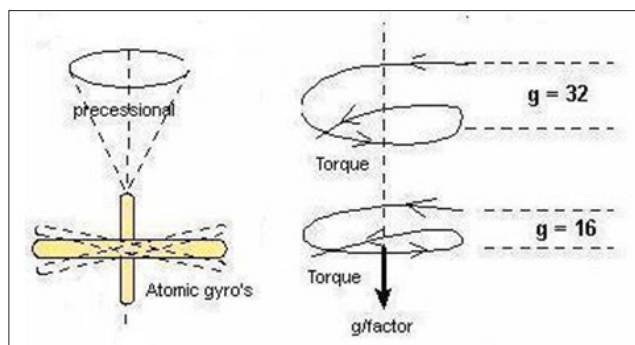

Figure 8

Accordingly, we do indeed accelerate for every degree of altitude, being pulled upon or driven with greater and greater force. Nothing ever – as we call it – can fall at the same rate through all altitudes.

Our famous notation that the acceleration of  $g$  is so and so in number of is therefore a mere figure of speech. And yes, it would be difficult but not impossible to rate our factor of  $g$  more precisely at each point, each altitude that is. Then take an average thereof for a more realistic figure.

The true complete factor of gravity therefore is not the same everywhere on earth; it varies all over the earth, and now we should be able to tell how and why that is so.

Then to get to this 16 and 32 for a T/factor? For that we must look to the law of Newton in its calcs, the faster an object moves so much the greater its force to a factor of  $g$ ; yes, indeed but the same must be divided by radius and that brings it down rather quickly. **Remember therefore that the term “freefall” is but a figure of speech, never at all real. And being weightless (as in space) is also but a figure of speech.**

No one is ever without weight, as in without a force upon him. A person of some 165-lb on the surface of the earth may have a crushing force of more than 5000-lb in space. Those 5000-pounds of force then are equally offset or augmented upon him by his velocity in radius to be kept in a straight line of travel. So, it only appears as if he is weightless, mere appearances mind you. The only way that we are able to read a factor of  $g$  upon the scales is because that factor of  $g$  does not relate to what is known as centrifugal, the impact thereof.

Then there is this secret the linear power of any coordinate towards the design of an eight is at maximum when it factually crosses over (true magnet) any degree short of directly crossing over decreases its linear (pull-push) capacity – yet remains effective towards the factor of gravity, in-that it nonetheless completes a circle, that may in one be seen as less weight.

**Inertia**

And yes what is the impact of  $g$  by which gravity is calculated, since it is equally used upon the surface of the earth for anything **not into** any gravitational direction, like as in Figure 9, **because the  $g$ /factor equally translates into a factor of inertia.**

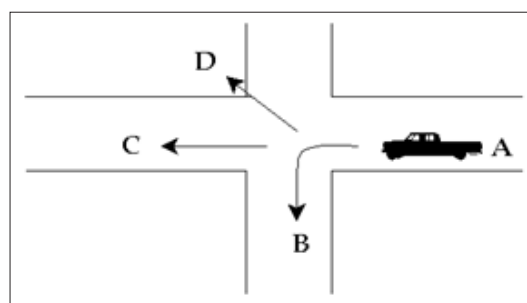

Figure 9

Here the pickup as it wishes to change direction must endure a centrifugal impact calculated in the same way by the same factor, or else it would move straight on. Our famous law of “Once in motion stays in motion.” And “in order to redirect anything from its straight direction a force to the contrary must be applied.” Once in motion stays in motion may not be fully correct; but all things on the move will proceed straight on simply because its movement affixes itself in place just as a gyro does for its angular movement. **So, you see its all in movement by coordinate and to direction of.**

And how is that compounded to what we call a four-fold force? For one thing the pickup has movement that accounts for half of its force. Secondly it has all these atom/gyros of which it is made up that effects a staying in place, but once set in linear movement it comes to compound that linear to a four-fold being.

For we must bring the overall movement of the pickup to a halt to its inners, all these atoms for their so-called stationary factor on the move are to be brought to a halt, which as such induces resistance whereby the total of force brought to a stop will be fourfold. And how do we notice or feel anything? For while we upon mother earth are moving with a pretty good clip in a circle into two directions simultaneously none of that movement is felt. It is by a **change in things** that we have feeling, like accelerating or deceleration, as well as change in direction of movement.

And like our tides caused by the inertia of a moving moon redirects anything not securely fastened upon the earth so we ourselves are moved, that is to say tilted by the passage of the moon. It may be minor but our straight-line trajectory to the very center of the earth is nudged over.

Additionally, we in our upright position, at nearly any latitude away from the equator are vectored to two different points on the earth. Foremost its center and secondly upon the axis of the earth, all because we are in circular movement with it, gravity acting to both directions.

**If then anyone doubts my word try it out for yourselves**, with some sensitive equipment this should be no problem.' If there were no tides, I would be found wrong **since however we do have tides I cannot be wrong.**

MISC.

Quote: *A black hole is a region of space where the gravitational pull is so strong that not even light can escape from it.* Unquote.

It is hard to believe that any human being can come up with such fantasies, not having the slightest conception of anything in science. And I would like to spare them the pain and disgrace these are bringing upon themselves, but I can only lead a horse to water, not make him drink.

Light as the momentary impulses imposed upon the all pervading fundamental movement has nothing at all in common with gravity, just as the planet Venus has no effect upon the weather on the earth – **so light as any kind of wave is totally oblivious to gravity.**

Einstein claimed light to bend around the sun by gravity. **Absolute nonsense of course;** all one needs to do is look at the sky for its blue deception and the red sky in the morning or evening, realizing how these come about by simple refraction. Or that wet appearance on a hot day on the road, simple refraction. In my book one must be devoid of common sense to even breathe such folly. And you honor such ignorance? **Shame on you to glorify the most ignorant and most cruel among them.**

Quote: *A gravitational wave is an invisible (yet incredibly fast) ripple in space. They travel at the speed of light, and squeeze and stretch anything in their path as they pass by.*

Come now my dear people I am beginning to get sick of all this nonsense, there is of course no such thing wave or otherwise,

even light itself for its physical innovation is never a wave; nor as such is it light as in illuminating things. We are the ones in our spirit that interpret certain simple movements into illumination as well as into color, and even sound as such does not exist except by our interpretation of simple movements.

We are spirits, and that alone - made to dwell in a home made out of the dust. That home then accounts for nothing, like the Almighty Lord said; *“Not what enters into the mouth but what proceeds from it is what determines what we are.”* We claim such a thing as death, but what is death? No one on this earth since Adam has ever died, not one single person since spirits once given cannot die, only our bodies turn back into the dust from which it was made. One may grieve for a lost father, mother, or child, but grieve not too long for you will again see all of them, no one is ever lost.

To really die as the nomenclature of death is to be expelled from the presence of God the Almighty One, never at all in all eternities to behold His majesty or come near to His presence. **That is death, the real death.** They will have a place to dwell but that is all, no entry into heaven whatsoever as the sons of God, the righteous ones will. **Has one never read the epistle of John, or is it that God has closed their eyes?** It is however about time that we as a race should wake up to the truth?

Man's teachers will be in sad shape when everyone around them comes to curse them to their faces, like as it will be; **“You lying bastard I am here because I believed upon your lies, etc, etc.** How dreadful indeed it will be for the priests, pastors and the popes, never at all to find a friend, and be cursed at daily.

Has it not been said: **“The truth will set you free”?** That goes for the sciences as well as what we call religious aspects. So is my admonition; **Watch what you hear and how you hear, and watch what you say and how you say it.** But of course, there always have to be those to put their two cents on the net as if they knew something; poor souls not realizing how they are gambling with their own life's

Gravity is a simple thing at least to me it is - as are the foundations upon which the earth has its being. What a silly thing to say quote; *“That as gravitational waves (that do not exist) passes earth it squeezes and stretches space.* Unquote.

Space cannot be squeezed nor stretched nor even imposed upon, emptiness is simple emptiness – it cannot at the same instance be something of substance to remark upon. **Your Einstein has done more harm to you in all of the sciences than you can lay a finger on, nor is he the only one to blame but yourselves as well to believe upon lies and stupidity that to everyone will come to a dreadful awakening.**

I know for just as King Solomon said how with the gift of knowledge one will not only know what is past and present but the future as well and how it will be in that future. For one thing there will be no taxes, nor mortgages, nor will there be any poor, and for each day work everyone will have a day vacation with full pay. And all transportation will be free for everyone.

I indeed know how to govern since I was taught by the All-time Governor. Nor will anyone with his hide still upon him enter into that new world. And any man who sits down to eat with his head-gear still upon him be it in private or public will be send to

the pool of torment for a minimum of ten years to contemplate upon his lack of integrity, and ingratitude.

The Michelson Morley experiment, compensatory as it was did not teach man how all light and other so-called waves do not have their own momentum but are driven at one and the same rate to vary only for distance in time by the angular distance it must pass in addition to its nominal length. And I have given man the proper way in which to calculate that velocity at any time anywhere.

The velocity of light cannot be calculated on a two-dimensional level since it operates or moves on a three-dimensional level. The crest-to-crest measure is called the **nominal** length; the full length is the **nominal plus the angular**.

For the example assuming nominal at 7000a diameter at  $1.54 \times 3.14 = 4.83$ .  $300,000 : 7004.83 = 42.82 \times 7000 = 299,793$ -km/sec. The 4000a wave has a relative velocity of  $300,000 : 4004.83 = 74.90 \times 4000 = 299,638$ -km/sec.

And how did I get to the diameter by which these pass? Quite simple, by any two figures one can always find the third, so I utilized man's space velocity at the longest length in light since that of course will arrive first. Then for all lengths to travel at the same relative **velocity in space is of course a crock**, if so, our air would have but a single color, and no rainbow would exist. Or am I too deep to follow?

From space to our atmosphere is 90-km/s reduction meaning every wave would go to 4800a, yet our atmosphere shows all lengths. That in itself disproves mans imagination.

How extremely poor man indeed is coming to understand nature in its fundamentals. Like a blind man attempting to teach his pupils the ins and outs of light, when of course he has no eyes to see.

On the net a blind one - said "Gravity pulls things down." As if we did not know, while in reality gravity does not pull at all. One should educate himself with facts and reality before he opens his mouth. And while to the majority of the human race the Almighty Lord leaves them ignorant, it is by His grace to reveal His secrets to whomever He wishes, that these might teach others. What's wrong with admitting that he does not know when he is without insight from above? Where is the integrity in man? "An apostate generation, all of who's deeds would be criminal and oppression" So the Almighty One prophesied that this generation would be, and so it is except for His elected one's He would send among them. Who then will be wise and watch what they say and do?

Quote: **Gravity travels at the speed of light**. Unquote

No, it does not - it does not travel at all, its no more than an inclination into a force that has its maximum or standard at 300.000-km/s, the same movement and same speed by which all waves are driven. Although gravity is hardly by any waves even as light is not by waves. For light it is angular momentums, for gravity it is a mere precession, that as such can be looked at for angular movements, although I prefer to call them inclination into the angular by which they are already arrested.

To thus calculate the speed at which gravity operates, its pulling power is 300.000-km/s, that then is reduced to the degree of torque placed upon each atom coupled with the resistance of all that is within its path of movement. Our best bet is to simply keep what we already have, its acceleration by ft in seconds in seconds. The ultimate speed by which anything can be drawn is just like that of

light in its relative velocity. Or electricity for its relative velocity. Relative meaning its true distance in time.

The earth itself also has its seasons not for its orbital movement around the sun, but by a precession that comes to its full rotation just 20 minutes short of any full turn of orbit, **and if anyone tells you differently do not believe upon lies**. Or we could look at the magnetic lines as long bolts with the atoms for nuts rotating along its threads.

Electricity also is just as we generate it by twisting magnetic lines around one another into a braid that then appears like magnets end to end. And easy to prove just by holding a conductor to a magnetic pole the wire will be push pulled (DC of course) It in fact is a lie to claim electricity as a flow of electrons, wake up my dear people come to some reality in life.

Quote: **In physics; gravity is a fundamental interaction, which may be described as the force that draws material objects towards each other**. Unquote.

That statement is of course most elementary seeing it does not name the force, and what is that; "Fundamental interaction?" What is so fundamental? Two objects never draw themselves together, there is that third agent and how that agent operates. That is what I have brought to revelation and not by any discovery.

#### How gravity works

When you wrap a string around a stick and move the stick the string goes with it. This may be one way to explain how gravity finds its movement to a center, never at all to a body. But that is not the way by which things are moved. It is **rather by the enclosure of that pattern of eight**, once within its circular design all things are coerced inward, like as being pushed in, but its more like drawn from all angles, like closing in the circles. You see understanding nature is easy explaining it is an altogether different story.

#### Electromagnetic

What is that silly word supposed to mean? Silly indeed since electro is magnetic as magnetic is magnetic, what therefore is the sense in saying magneticmagnetic, or **rotatingstraight**? Should we not separate the two words, electric as rotational magnetic, and magnetic as stationary magnetic? Or are we still hung up on those none existent particles on the move to make for a rotating magnetic string of power?

#### Who could possibly believe upon such a thing as if any part of an atom could wedge its way through a maze of other particles blocking it way?

What it means in simple terms is that when you have a four lane freeway grid locked on all four lanes with cars, here comes J,J, who has no sense and so he sways between all these cars to beat them all. But how can he? Unless his vehicle is no wider than a hands-width he will not fit between anything. **And so J,J Thompson just made a total wreck blocking the whole of the freeway**. And for it he was given the Nobel prize. Some justice - is it not? Only these persons will come to great shame and dishonor, along with anyone to believe upon their stupidity.

Electricity is just as we produce it twisting magnetic lines of force into a braid being nothing more than a rotating magnetic string of power. Shall we than call a pig a rooster or not rather keep

proper names for proper animals? The simplest of all experiments proves it.

Man is completely ignorant about so many things in everyday life like what energy is or a charge, as well as gravity, electricity and magnetic force, not having any understanding of its fundamentals. Sad indeed but true all because he does not endeavor to plant the root of wisdom into his heart, claiming his own ingenuity to be greater than that of Him who formed his body out of the dust of the earth.

Quote: *“On the surface of a planetary body such as on earth this leads to gravitational acceleration of all objects towards the body modified by the centrifugal effects arising from the rotation of the body. Etc.*

How poor, for how come we are walking upright at any place on earth? To be pulled to a body we should be flat on the ground not walking upright. **Have you not considered that as well that at all times we walk upright in a direct line to the center of the earth? And why might that be; and what does that tell us?**

Obviously, **we are not drawn to a body but by a force and to the center of that force**, and that being so it will have to be that force directing us. Does not that make perfect sense? And what is “modified by centrifugal effects supposed to mean, if not ignorance?

Then for gravitational waves The Ligo Hanford Observatory in the state of Washington, where that none existent radiation was measured. **Don’t believe any of it**, these scientists have no idea what neither radiation nor gravity is or was. God had not given them that insight. Man may have his atomic bomb but he has yet to figure out how it really works. Oppenheimer only understood first grace material.

Do me a favor will you; don’t ever pronounce the word evolution of a positive tone, for it brings with it not only the penalty of death; but a horrible painful awakening I wish to spare you. And for man’s benefit look at anything and everything that your Einstein came up with, or that cripple person, **as gross stupidity**. Like a disease, whoever touches it will die a thousand deaths. Wake up to the truth it will be healing for your bones.

Quote: *China has broken its own record in hyper-gravity research after completing construction of its multi-ton centrifuge that can compress space and time.* Unquote.

When will man ever learn that he has allowed himself to be brainwashed by the most ignorant on the face of the earth? Shall I say; serves them right when these are shamed and rejected by all mankind? And yes – serves them right.

Quote; “The force of gravity acting on the center of mass produces a torque. Unquote.

Is there no common sense? When an upright gyro spin will it be the power holding it down to nudge its axis of rotation to the right or left? If one makes a right turn on the road, did he go left? Stupid question you might say, but that’s how the quotation is. It’s a linear push or pull on the axis of that gyro, not as such its center of mass by what is called gravity, although logically its axis is its center of mass. Why not therefore use proper terms instead of coy disguises. It is the movement of the earth in linear fashion that effects the torque for gravity.

## Magnetic

When you have 2 magnets its nothing more than a couple peaces of steel that exhibit movement. Ask yourself therefore this question; Where did that movement come from; how can it have that movement - and at that to pull and push? It had to come from somewhere; it did not fall out of the sky. **And unless someone created that phenomena how could it possibly exist.** Just because it is common with us does not mean it can create itself, as if there were such a thing as evolution. For that is a heinous crime to even think that way; that not only will cost a man his life but extreme pains I would like to spare him.

And so yes that movement was created or simply set forth by Him who created all of the universe as no more than a tent for Him to dwell in. If we cannot realize or believe upon that we are in wretched shape and more than just ignorant. If I have that insight being nothing more than a man how much the greater shall He be who gave me that insight and taught me His way?

If then we come to explosions; these occur because the force that keeps our feet upon the ground is a conductive movement at the rate of 300.000-km/s, of which every atom is constructed. With a spark therefore, which is none other than a high movement into gun-power it by conduction raises the rotational velocity of all the atoms in reach, and these again to others by chain reaction at the rate we call the speed of light.

As then all things at high revolution come to expand by what is called centrifugal action – so all these atoms in the blink of an eye come to expand demanding room that by us is seen as an explosion. Take hydrogen and oxygen mixed in gas form, introduce a spark into it and see how greatly these gasses expand while joining together in what to us is H<sub>2</sub>O. For it is only then by their high expanded movement that these will join magnetically.

It is also by that high velocity in expansion that the atomic bomb shows its power by chain reaction to expand all the air around its core causing the shock-wave. And for its extreme velocity or rate of movement it comes to burn and melt whatever is near. **Heat as such being a rate of movement.**

And all of our internal combustion engines have their power in and by magnetic; the spark at the top of the cylinder does exactly what happens in any explosion, raising the speed of that figure of eight at which the atoms operate –that then expands in size demanding room, that we interpret as pressure.

When you drive a vehicle into a brick wall the amount of damage depends on how fast it went, so it is with heat, the higher the speed the greater the temperature, seeing how temperature **is a rate of velocity** just as voltage is a rate of angular velocity.

If you will not take my word for it, first of all **shame on you to doubt me**, secondly try it out for yourself, hold an electrical wire near a magnetic pole and it will vibrate back and forth to that pole at the rate of its revolutions, electricity as nothing more than a rotating string of magnetic entities end-to-end all because we generate it that way.

**It is sheer ignorance to even believe upon electrons, no one has ever found one nor discovered one, other than in ones imagination.** Being so/called all negative they should cling to a positive pole should they not? **Well then prove that is so against**

**the obvious evidence that no such thing ever has come to pass;** the evidence being clearly against that crock of J,J Thompson. To me it is pitiful that so many allow themselves to be deceived and brainwashed by nothing more than fantasy.

Quote: *Gravity is the law that every object with mass attractors every other object in the universe in proportion to each mass and inversely proportional to the square of the distance between them.* Unquote.

Mass in all reality has little to do with gravity. If it did, we would be flat on the ground rather than walking upright. None of us is drawn to any mass, nor by any mass. Our upright position anywhere on earth clearly indicates how we are drawn by a force, and since the only force on earth is that magnetic entity, it is magnetic, also because in all of nature there is no force nor entity with the capacity to draw or move things linearly than what we know as magnetic.

The fact that we are tilted when the moon passes over us all in itself is evidence that we are drawn to a center, not mass. Prove it to yourself you will find me truthful.

Figure 5 clearly shows how from angular movement linear movement is established. Nor is there any other force or movement like unto it, and it is found throughout the universe. So, lets wake up my dear people, wake up to reality, smell the daisies and become real as well as educated.

### Conclusion

I am not going further; I have said enough, nor have I discovered anything, but insight was given me that comes with wisdom and understanding, a gift that can only come as we say from above, from the One who is all wisdom. And so my entry into this world was prophesied at multiple places. But to the majority the Almighty one has closed their eyes. Like He said; **“That hearing they do not hear and seeing they do not see lest they turn and be healed.”**

And what shall we say of truth if not He who made all things is truth, which He imparted to all such as love Him and keep His commandments. Some will say;” but who is this guy to know so much? In that respect however you would not believe me; and so, let it be. So have I spoken and so have I written, let it be for the benefit of all man.
